**SUPPLY, DELIVERY, INSTALLATION, CONFIGURATION AND
COMMISSIONING OF NCMH INTERNET PROTOCOL-PRIVATE BRANCH
EXCHANGE (IP-PABX) CY 2021**

I. Background

The existing NCMH Private Automatic Branch Exchange (PABX) is a hybrid type of telephony system that is capable of handling analogue and digital telephones. It is the primary voice communication in entire NCMH that connects all offices and wards and has a maximum capacity of 300 local lines and 14 trunks lines.

NCMH existing hybrid PABX system needs to be rehabilitated and integrated to a new IP-PBX system that support pure IP telephony to cope up with growing demands in voice and data communication. The following challenges on installation and distribution need to be address:

1. Rehabilitation of cabling for telephone lines was conducted two decades ago.
2. Majority of the telephone cables distributed in the hospital are damaged due to corrosion which resulted to sharing of line extensions. Many offices shared one extension lines (e.g. Pav. 7 - one line shared by main lobby, pharmacy, admitting and other offices/departments).
3. Cabling for telephone lines are not available to all offices, pavilions and wards resulting to unorganized, cluttered and hard to administer telephone system.
4. No available module slot for expansion to accommodate additional telephone lines for urgent and future requirement of telephones.

The proposed upgrade of existing PABX system will provide NCMH advanced communication features, flexibility and scalability/expansions to address NMCH hospital's immediate and future requirement. With the completion of construction and renovations of different buildings, the availability of telephones are much needed to give each offices, wards and personnel a reliable and real-time telephone communication system that will help them on performing their mandate and tasks fast and efficient.

This project serves as a phase of digital conversion that will give NCMH many opportunities for digital communications technology. It will soon be replaced into a Unified Communications System that will converged VOICE and DATA into one infrastructure. It is envisioned that this convergence of voice and data will totally enhance NCMH communication system and offer more advance features, manageability, flexibility, scalability and real-time collaboration. NCMH will greatly benefit on this innovative solution as well as the NCMH-Camarin extension.

II. Objectives:

This project aims to:

1. Procure a Unified Communication System that will serve as the new IP-PABX of NCMH.
2. Seamlessly integrate newly procured IP-PABX to NCMH existing telephony system.
3. Improve NCMH communication system that offers more advance features, manageability, flexibility, scalability and real-time collaboration
4. Reduce maintenance and operational costs.

III. Scope Of Work:

A. General Requirement

The supplier shall:

1. Design, supply, deliver, install, configure and commission the Unified Communication System and all the needed/required modules for this project.
2. Assess existing NCMH:
 - a. PABX system including its connections, user's access rules and security policies
 - b. Existing LAN if it is ready and capable of handling additional demands of voice when combined with day-to-day data traffic. The LAN assessment will include but not limited to the following;
 - i. Network performance, availability and scalability of NCMH LAN infrastructure
 - ii. Network topology and access networks
3. Integrate newly procured Unified Communication System to NCMH existing PABX system.
4. Integrate newly procured Unified Communication System to NCMH 1553 Helpline Crisis.
5. Separate voice and data on logically different networks if feasible. Different subnets with separate address blocks should be used for voice and data traffic;
 - a. Voice and Data network should seamlessly work with each other.
 - b. Use strong security, authentication and access control on the voice gateway system, as with any other critical IPPBX, VOIP and network component;

CONFORME:
<i>(Company Name)</i>
<i>(Name and Signature of Authorized Representative)</i>

- c. Incorporate strong security to prevent all possible IPPBX, VOIP and network threats;
- d. A mechanism to allow IPPBX and VOIP packets/traffic through NCMH future software and hardware-based firewalls
- 6. In terms of system architecture, the NCMH Unified Communication System will have following attributes;
 - a. Flexibility - The system should be easy to integrate into any existing voice or data network such as NCMH ICT devices and will support a wide variety of NCMH applications, services and security implementation.
 - b. Scalability - The system be of high modularity and scalability with the ability to scale to full blown IP telephony with a single management application, full features consistency, cost-effective hardware and with centralized or distributive intelligence.
 - c. Reliability -Reliability should be 95%
 - d. Management system - The system management should be user friendly. Graphical User Interface (GUI) should be well organized and should provide easy understanding of the data presented on the screens. Navigating the screen should be limited to what is only necessary. It should provide event logs, notification mechanisms or reports of any kind. From a troubleshooting standpoint, it should offer diagnostic tools or IP statistics counters.
